# *Research by country*

A large, horizontal, pink brushstroke graphic with a textured, feathered edge on the right side, set against a white background. The text "TO SUM..." is centered within the brushstroke.

*TO SUM...*

# *Gaps*

- Predominance of HIV related research but very little on HIV in relation to LBQ women and trans masculine people.
- All the studies point towards need for LGBTQ+ inclusion in pre-service and service training for HCP and other staff.
- Some work done but much missing on mental health, substance use, gender affirming care, SRH, trauma and violence
- Health topics with virtually no coverage – cancer, other chronic non-communicable diseases.
- No information on intersex people

***Thank  
you***
